Join us at IMTS 2018!

Carr Lane returns to the largest manufacturing show in North America

Carr Lane Manufacturing is excited to return to the largest manufacturing trade show in North America, IMTS. You can find us at booth 431663 in the West Hall.

In addition to debuting our 2019 edition print catalog, we'll be showcasing several new products at the show.

If you are planning to attend IMTS and haven't done so already, be sure to add Carr Lane Manufacturing to your "My Show Planner." It will make it easy to find us during the show and it will also automatically register you in our drawing for a \$50 Amazon gift card!

IMTS2018

Login at www.imts.com and add Carr Lane Manufacturing to your MY SHOW PLANNER to be registered in a drawing to win a \$50 Amazon gift card. See you at IMTS!

 Submit

We use all the feedback we receive to improve our site. Recommendations have resulted in formatting changes or the addition or clarification of product information. In nearly all cases, we reach out to each respondent to thank them for sharing their user experience. So, the next time you're visiting carrlane.com we encourage you to share your comments with us, good or bad, about your experience.

Product Spotlight:

Air Rest Buttons

**Air Gap Sensors
Giving You Trouble?**

Here's Your Solution:
carrlane.com/mysolution

Take the guesswork out of loading your parts. Whether you run your operations with robot or human guidance, Carr Lane Manufacturing's Air Rest Buttons deliver feedback with every load.

Air Rest Buttons

Carr Lane
MANUFACTURING CO.

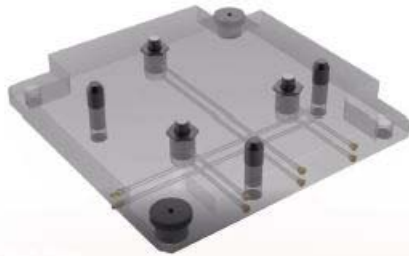

Air Rest Buttons allow using pneumatic position control to detect proper workpiece loading in a machining fixture. These modular units consist of a threaded body installed in a fixture, which holds a precision floating plunger. Made in USA. **Patent pending.**

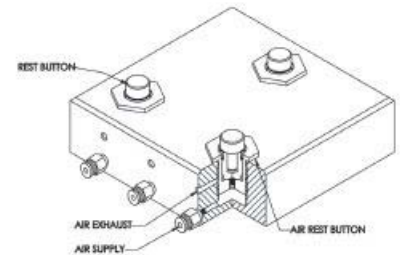

This plunger has a reamed hole, available in a choice of three diameters, that accepts any height of our standard press-fit-type Rest Buttons.

Proper placement of a workpiece on the Air Rest Button assembly causes the plunger to fully retract into the body. This seals off air flow, which increases the overall pressure of the system.

Example: three ARBs provide full 3-point support under a workpiece. Air passages to the ARB can be drilled in the fixture plate.

Find out more about Air Rest Buttons from our online catalog at carrlane.com

STOP BY AND SEE US IN 2018!

A trade show is your chance to see Carr Lane Manufacturing products first-hand. If you are planning to attend any of these shows, we invite you to stop by our booth, see what's new, ask a question, and find out how Carr Lane Manufacturing can answer all your manufacturing workholding needs start to finish!

September 10-15, 2018 | Booth 431663

FABTECH-ATLANTA – Atlanta, Georgia
November 6-8, 2018 | Booth A3021

The entire 2018 tradeshow schedule is always available at www.carrlane.com

Yellow Trig Books Helping Students

An Important Tool In Every Machinist's Toolbox!

The Lower Pioneer Valley Educational Collaborative (LPVEC) in West Springfield, MA, increases the capacity of school districts and supports the success of all students by providing high-quality shared programs and services in a cost-effective manner.

Carr Lane was happy to donate trig books to LPVEC earlier this summer where students are learning set up procedures, how to manually machine a part to specifications as well as programming codes. Hazel Rodriguez shared how the books are used:

"We put it in their tool boxes that we supply to them and will be able to take with them upon graduating our program. We know that this booklet will be of great use out in industry when they graduate and start working out in the field. Thank you for donating these trig books to us, we all appreciate it very much!"

We wish all the students at LPVEC well and encourage them to become leaders in the world of aerospace and advanced manufacturing.

Yellow Trig Books Travel To Hot Springs, AR!

Perfect For Figuring Correct Height For Gage Blocks

The students at National Park College Innovative Technologies Center Fast Track Program also received the infamous yellow trig books. This program, located in Hot Springs National Park, Arkansas, trains employed and non-employed people so they have a better chance for advancement and or industrial employment. In the picture at left, students are figuring the correct height for gage blocks used with a Sine bar for a given angle.

We wish all the students at the Innovative Technologies Center well and encourage them to become leaders in the world of aerospace and advanced manufacturing.
